Full-stack engineer with 7+ years building production systems, cloud infrastructure, and AI-powered applications. Currently focused on LLM agents, prediction markets, and web applications. Background includes startup co-founder, senior roles at Capital One and T-Mobile, and multiple hackathon wins. Seeking opportunities to build intelligent systems at scale.

Technical Skills

Languages: Python, JavaScript, Java, SQL, C#

Frontend: React, HTML, CSS

Backend: Node.js, Django, REST APIs, Microservices Architecture

AI & Machine Learning: OpenAI APIs (GPT-4), Anthropic Claude API, LLM Agents, Computer Vision, RAG Systems

Cloud & DevOps: AWS (Lambda, EC2, S3), Docker, CI/CD Pipelines (Jenkins, GitLab)

Databases: PostgreSQL, MongoDB, Redis, MySQL, Firebase

Web3 & Blockchain: Ethereum, Smart Contracts, OpenSea SDK, Etherscan API, Flashbots

Professional Experience

Independent Software Engineer — AI & Web3

Self-Employed | December 2024 – Present

- Building LLM-powered systems using OpenAI and Anthropic APIs with persistent memory, tool integration, and agentic architectures
- Developed rowing-tracker app using Claude Vision API for AI-powered detection and parsing of rowing machine screens from photos
- Designed context-aware Twitter and Discord bots with conversation memory and external tool integration (Google Calendar)

Senior Software Engineer

Capital One | November 2022 – November 2023

- Designed automated testing pipelines for customer email notifications triggered by credit card activity using AWS Lambda and S3
- Developed cloud-native Python microservices optimizing transaction processing at scale (billions of transactions annually)
- Led roadmap planning and product ownership in agile environment, coordinating with cross-functional stakeholders
- Managed summer intern program including project scoping, code reviews, and daily mentorship; interns shipped Python test automation tool

Web3 Automation Engineer

Dustbunny | September 2021 – June 2022

- Built high-performance NFT bidding system distributed across 50 machines to handle IP rate limits, processing thousands of requests per minute
- Created collection floor polling utility aggregating real-time NFT prices to Redis for market analysis
- Developed intelligent bidding algorithms analyzing floor prices, existing bids, and historical data for ERC-721/ERC-1155 tokens
- Deployed ERC-721 smart contract via Remix; launched CryptoHeartZ NFT collection

Software Engineer II

T-Mobile | June 2018 – April 2022

- Built internal automation web app reducing network operations workload by 80%, replacing multi-day manual processes with minutes-long workflows
- Designed modular Python/Django backend with microservices architecture, enabling other teams to integrate via shared API endpoints
- Redesigned frontend from Django templates to Angular with reusable component library, accelerating feature delivery
- Built spectrum negotiation documentation platform using Hugo, collaborating with business stakeholders for non-technical usability

Computer Science Instructor

Nucamp Coding Bootcamp | January 2018 – May 2018

- Taught Angular and Ionic development to classes of 8-12 students covering single-page applications and cross-platform mobile
- Led students through Git workflows, frontend architecture patterns, and industry best practices

Consultant Engineer

Slalom Consulting | November 2017 – March 2018

- Salesforce Certified: Integration Architect Designer, Administrator, Platform App Builder
- Collaborated with cross-market teams to deliver enterprise Salesforce solutions for diverse stakeholders

Software Developer Intern

Givesafe (now Samaritan) | December 2016 – April 2017

- Contributed to Ruby on Rails backend and React Native mobile app for social impact platform connecting donors with people experiencing homelessness

Co-Founder & Technical Lead

OLI Fitness (Startup) | January 2016 – March 2018

- Built fitness tracking system using Microsoft Kinect SDK and computer vision to analyze weightlifting form and detect injury-risk movements
- Developed movement scoring algorithms comparing user joint positions against professional form overlays in real-time
- Regional finalist at Princeton Tiger Launch and UW Business Plan Competition; selected for Collision Alpha startup program
- Published extended abstract at ACM CHI 2017 on computer vision applications for fitness tracking

Projects

Polymarket Analysis Tool — Python, React

- Building prediction market analysis tool to detect trading opportunities via Polymarket API
- Implementing multiple signal detection strategies: arbitrage, spread analysis, volume anomalies, momentum, and mean reversion

azoni.ai — React, OpenAI API

- Personal portfolio featuring GPT-powered chatbot that answers questions about my background and experience

Rowing Tracker — React, Claude Vision API, Firebase

- AI-powered rowing training app used by local crew; extracts metrics from rowing machine screen photos
- Gamified with leaderboards, streaks, and achievements to drive engagement

A Dawn of Heroes — Python, React, Game Development

- Contributing game balance and mechanics for NeverWinter Nights persistent world server (20-50 concurrent players)
- Built player dashboard with DPS calculations and real-time leaderboards

Education

Master of Science, Software Engineering — Colorado Technical University, 2021

Completed while working full-time at T-Mobile

Bachelor of Science, Computer Science — University of Washington Tacoma, 2017

Dean's List • President, Huscii Coding Club • Led Expedia Coding for Kids mentorship

Awards & Recognition

- **1st Place**, T-Mobile Big Data Hackathon — Built HashMaps, auto-hashtag tool using OpenCV image analysis and geolocation
- **Finalist**, T-Mobile IoT Hackathon — Modular smart home security system; presented at Seattle Interactive Conference 2016
- **Head Organizer**, Global AI Hackathon Seattle 2017 — Coordinated sponsors, judges, and participants
- **Published Researcher**, ACM CHI 2017 — Extended abstract on computer vision for fitness applications
